

THE CARBON BLOCK FILTER

FOR THE ABSOLUTE BEST CURLING ICE AVAILABLE, TRUST THE JET ICE CARBON BLOCK FILTER.

When using the Jet Ice system in conjunction with the Jet Ice carbon block filter, good ice becomes great ice. This inexpensive unit effectively filters the raw water to remove any excessive organics or chlorine that may be present in your source water.

Organics and chlorine are contaminants that can foul treated water making the ice sheet 'greasy' leading to inconsistent curl and rock speed. The result is a great ice surface that is consistent time and time again.

The add on filter system is sold complete with the block housing and the initial carbon block for \$99.75. Replacement carbon block filters are readily available for \$48.00 each.

Recently, Mr. Don Powell, Head Ice Technician at the Weston Golf and Country Club commented on the value of this simple system. "When putting ice in for the Casino Rama Skins game the ice technicians were hit with high levels of chlorine in the source water and the carbon blocks effectively removed this unwanted contaminant, ensuring the ice remained consistent."

BENEFITS OF THE CARBON FILTER:

- filters the raw water to remove any excessive organics or chlorine that may be present in your source water
- eliminates any contaminants that can foul treated water
- the result is an ice sheet that is consistent for both curl and rock speed

RECENT PROJECTS: • 2010 Vancouver Olympics • 2010 World Women's Championship
• 2010 Tim Horton's Brier • World Curling Tour Event 2009
